

5 Benefits of Windows Virtual Desktop

In today's environment, enabling remote working is essential for any business. Windows Virtual Desktop's desktop and application virtualisation empowers your business to provide a secure, productive experience for your teams.

With Windows Virtual Desktop, you can -

1. Enable secure, productive remote working, from any device

- Windows Virtual Desktop provides Windows 10 and Windows Server desktop and application virtualisation from any internet-connected location.
- Seamless integration with Microsoft 365 apps and Microsoft Teams gives end users the desktop experience they're used to.

2. Reduce costs of licensing and infrastructure

- Use Windows and Microsoft 365 licenses, and pay only for what you use.
- Maximise use of your virtual machines through exclusive Windows 10 multisession capability to support multiple concurrent users.

3. Protect against outages

- Help keep your team running by leveraging built-in Azure Site Recovery and Azure Backup technologies.
- Minimise downtime and prepare for planned maintenance with Azure Service Health alerts and guidance.

4. Simplify IT management

- Windows Virtual Desktop manages the virtual desktop infrastructure for you, so you can focus on users, apps, and OS images instead of hardware inventory and maintenance.
- Get your users up and running quickly and securely, with limitless scale and full automation that you control.

5. Keep applications and data secure

- Apply access controls to users and devices, simply and easily with Azure Active Directory Conditional Access.
- Reduce vulnerabilities and help keep your virtual desktops secure by leveraging solutions like Azure Firewall, Azure Sentinel, and Azure Security Center.
